

Artefact becomes a partner for Google Cloud's Gemini Enterprise for Financial Services to help deliver domain-specific agentic solutions

Global data and artificial intelligence consultancy expands its collaboration with Google Cloud to help capital markets and corporate banking institutions automate complex financial workflows with governed artificial intelligence.

Paris, September 23, 2026

Artefact, a global data and artificial intelligence consulting company, today announced that it is a partner and global systems integrator for Google Cloud's newly launched [Gemini Enterprise for Financial Services](#).

Building on its deep collaboration with Google Cloud, Artefact will help financial institutions operationalize domain-specific, agentic artificial intelligence solutions. This initiative combines Google Cloud's purpose-built financial capabilities with Artefact's end-to-end expertise across data strategy, governance, artificial intelligence engineering, and business transformation.

Delivering specialized artificial intelligence for the financial sector

Gemini Enterprise for Financial Services offers purpose-built generative artificial intelligence solutions and agentic capabilities tailored to the corporate banking and capital markets industries.

Artefact is one of Google Cloud's key partners on AI initiatives, including Gemini Enterprise deployment and adoption across customers, unlocking massive business value and productivity gains.

Through this collaboration, Artefact helps financial institutions deploy secure, compliant, and scalable artificial intelligence systems to address key industry use cases:

- Enhancing front-office interactions with contextual assistants.
-

- Automating risk analysis, fraud detection, and regulatory compliance workflows.
- Enabling secure access to enterprise knowledge and internal data repositories.
- Assuring high standards of governance, data privacy, and security in private cloud environments.

Unlocking value and accelerating artificial intelligence adoption in financial services

"Agentic AI is redefining how financial institutions operate, not just how they innovate. For banking and insurance leaders, the challenge has shifted from experimentation to reshaping the operating model itself, improving cost-income, containing the cost of compliance, and giving front-office teams both their selling time back and the expertise of the institution at their fingertips. This partnership is decisive because it pairs Google Cloud's Gemini Enterprise for financial services with our deep mastery of financial business processes, from KYC and credit review to claims and back-office operations. Together, we help institutions scale agentic systems where they change the economics of the business with the highest level of trust, explainability and security." said [Joffrey Martinez](#), **Managing Partner & Global Lead Financial Services at Artefact**
