

GenAI Newsletter July #2 – AI Learns Latin, Deletes Databases, and Plans to Monetize the Internet.

First things first, this is our last edition before we take a break in August. We know you'll miss us, but don't worry; we'll be back in September with more news, insights, and AI-powered shenanigans! This week, we've got everything from AI translating ancient Roman inscriptions to accidentally deleting production databases (oops!). Meanwhile, the internet is gearing up for a paywall revolution as publishers start charging AI crawlers, and OpenAI's ChatGPT is moonlighting as your personal Shopify shopping assistant. Throw in a $16.5 billion Tesla chip deal, Google calling local businesses for you, and Elon Musk reviving Vine (but with AI), and it's clear that the AI world is equal parts genius and chaos.
